

Jamil Mendez

Data & AI Automation Engineer · Philippines (UTC+8) · remote

jamilmendez1016@gmail.com · github.com/Jamil1016 · jamil-mendez.vercel.app

SUMMARY

Data & AI Automation Engineer with 5+ years automating manual work. I built a warehouse of 12.2M+ rows across 111 tables fed by about 14 scheduled pipelines, plus internal tools and an approval-gated LLM agent on top, on a BI and QA-automation foundation (87.5% less reporting time, 4.9% fewer defects). I build with Claude Code as a pair programmer: I own the design, review every change, and write the tests and evals. Open to part-time and project work, about 20 hours a week, remote (UTC+8, evenings and weekends).

SKILLS

Data & Languages: Python (pandas), SQL, PostgreSQL, DuckDB / Parquet

AI: Claude API, MCP, NL-to-SQL, LLM agents, prompt engineering

BI & Reporting: Power BI, Power Query, Excel VBA / Macros, automated PDF reporting

Platform & Tooling: Supabase, GitHub Actions (workflow orchestration), Google Cloud Run, Next.js, FastAPI, Playwright

Practices: ETL, data warehousing & data modeling, incremental sync, API integration, data quality & deduplication, Lean Six Sigma

EXPERIENCE

Data Analyst (Data & AI Automation) · Nanoninth (Ontel)

2025 – present · Hired as a Data Analyst; I build and run the data platform solo.

- Replaced a manual pull-and-clean routine spanning APIs, Google and Microsoft Drive, Sheets, and email with about 14 scheduled pipelines into a Supabase warehouse (12.2M+ rows across 111 tables).
- Built Pipeline Guardian, a production agent on the Claude API that auto-remediates safe pipeline failures inside a schema allowlist and escalates the rest by email for approval. Prototyped DARA (NL-to-SQL reporting behind Postgres row-level security).
- Built a workforce report-compliance platform (Next.js, Supabase): role-based approvals with write-back to a vendor API, once-only reminder emails, scheduled PDF packs and extracts.
- Shipped a Quote Automation System that took the accounting team from 20-30 quotes a day to over 100, with batch PDF generation and live collaboration.
- Automated the recurring PDF reports and built the warehouse dashboards so they refresh without manual assembly.

Demand Planning Analyst II · Emerson (Copeland)

2023 – 2025

- Migrated a manual Excel forecast-tracking process into a real-time Power BI dashboard backed by a Python pipeline that cleans, merges, and consolidates raw demand data.
- Removed the manual data-prep step, moving stakeholders from hand-built reports to live forecasts.

Quality Assurance Engineer · Citizen Finedevice

2020 – 2023

- Automated quality-report data collection and cleaning with Excel Macros, VBA, and Power Query, reducing reporting time by 87.5% and freeing the team for actual analysis.
- Fed Lean Six Sigma Kaizen work that cut defects by 4.9%. Earned the company's Top Management's Choice Award (2022) for higher production rate, less reporting time, and fewer rejects.

Service Crew · McDonald's Tanauan

2016 – 2020

- Worked the front line throughout my Industrial Engineering degree, learning pace, reliability, and discipline under pressure.

EDUCATION

BS Industrial Engineering, Batangas State University, 2020

AWARDS & LEARNING

- Top Management's Choice Award, Citizen Finedevice (2022)
- In progress: Google Cloud Associate Cloud Engineer, then dbt, then Google Cloud Professional Data Engineer
