Dear Hiring Manager,

I am a Data & AI Automation Engineer who designs systems that run reliably without constant supervision. I am writing to express my interest in contributing to your team, where I can apply a consistent track record of turning manual, error-prone data work into dependable, automated infrastructure.

At Nanoninth (Ontel), I was hired as a Data Analyst and went on to build the company's data platform single-handedly. It comprises roughly 14 automated ETL pipelines feeding a 111-table warehouse of approximately 12.2 million rows, replacing a manual process that previously spanned APIs, shared drives, spreadsheets, and email. On that foundation I delivered production AI tools, including DARA, a natural-language reporting assistant built on Claude and the Model Context Protocol, and Pipeline Guardian, an agent that monitors the pipelines, automatically remediates safe failures within a strict schema allowlist, and escalates the remainder for my approval.

I am most interested in impact that endures after a project ships. When the accounting team was reviewing quotes individually by hand, I built a tool that manages the review queue, generates PDFs in batch, and drafts the accompanying emails, with live presence indicators to prevent duplicated work; their throughput rose from 20–30 quotes per day to more than 100. The same approach defines my earlier roles: at Citizen Finedevice I automated quality reporting to reduce reporting time by 87.5%, contributed a Lean Six Sigma defect reduction, and received the company's Top Management's Choice Award; at Emerson (Copeland) I replaced a manual Excel forecast with a live Power BI dashboard backed by a Python pipeline.

My foundation in Industrial Engineering is the reason I address the process before the tooling. I am currently pursuing the Claude Certified Architect credential to ensure the AI systems I build are not only effective but also safe and well-architected. A fuller account of my work, including architecture diagrams and source code, is available at jamil-mendez.vercel.app, and I would welcome the opportunity to discuss how I can contribute to your team.

Thank you for your time and consideration.

Sincerely,

Jamil Mendez
